

Hepatitis C screening: Search Update

Conducted by University of Alberta ERSC; Submitted January 30, 2017

Search strategy & selection

We updated the original database searches designed and run by CADTH, for the period of November 1, 2015 to December 1, 2016, with two modifications. (1) CADTH reported conducting a limited PubMed search in November 2015 to capture records not found in Medline. The PubMed search strategy was not included in the review report. Since 2015, Ovid has made available a data file that includes electronic publications ahead of print (i.e., publisher records added to PubMed via electronic submission), in-process and other non-indexed citations, and Medline records. This 2016 update search was conducted in the new Ovid Medline file that includes electronic, in-process and non-indexed citations. Subsequently, we did not conduct an additional PubMed search as we felt confident the Ovid searches retrieved all relevant records not found in Medline. (2) An economic filter for the Embase database appeared to be missing from CADTH's original KQ3 (Cost-effectiveness) search strategy. We adjusted the reported search by inserting CADTH's economic evaluations/cost/economic models Embase filter (<https://www.cadth.ca/resources/finding-evidence/strings-attached-cadths-database-search-filters#eco>) starting at line 126. In addition to these database searches, we performed a grey literature search based on relevant sites listed in the CADTH grey matters checklist. Appendix A contains our full search as implemented and a table of our grey literature searches.

Two reviewers independently screened all titles and abstracts using broad inclusion criteria, and any citation thought by either reviewer as possible relevant at this stage moved on to full text screening by both reviewers. At this stage, citations were selected for inclusion or exclusion based on a structured form containing the detailed PICOTS and independent review, with any discrepancies resolved by consensus and/or a discussion with a third party.

Results

Figures 1 and 2 show the flow of the citations, for both our search update and incorporating these numbers into the CADTH review. Our database search retrieved 1071 citations and the grey literature search another 5 items for review (total n=1076). No studies were included in this search update. The excluded studies list, with reasons for each citation, is

included below.
