

Canadian Task Force on Preventive Health Care

Developing and disseminating clinical practice guidelines for primary preventive care based on systematic analysis of scientific evidence

About Us

The Canadian Task Force on Preventive Health Care is composed of experts who develop evidencebased recommendations for clinical preventive health services delivered by primary care practitioners. The Task Force is supported by the Global Health and Guidelines Division of the Public Health Agency of Canada, Evidence Review and Synthesis Centres from the University of Ottawa and the University of Alberta, and the Knowledge Translation Team from St. Michael's Hospital, Unity Health Toronto.

Message from the Chair

The American College of Physicians (ACP) recently published a <u>guidance</u> <u>statement</u> on screening for breast cancer in average-risk women. In it, the ACP evaluated the quality of breast cancer screening guidelines from around the world.

Among all of the guidelines evaluated, the Task Force's <u>updated breast cancer</u> <u>screening guideline</u> was the only one that received the top rank for both 'overall quality rating' and 'recommended use' of the guideline. The ACP highlighted the Task Force's rigorous use of high-quality evidence and highlighted how high-scoring guidelines "best articulated the benefits, harms, and strength of evidence and how these link to recommendations". A linked ACP <u>editorial</u> mentioned the importance of engaging in shared decision-making with patients, consistent with our 2018 recommendations and <u>patient education tools</u>.

In other news, two recent commentaries in CMAJ highlighted the threat of conflicts of interest in guideline development and dissemination. Dr. Diane Kelsall, CMAJ's editor, described that CMAJ will now require that all guidelines adhere to the International Committee of Medical Journal Editors (ICMJE) revised standards for protecting against conflict of interest. A second commentary in CMAJ discussed how guidelines developed for primary care by speciality societies can lead to the overuse of medical services, including overdiagnosis and overtreatment. The commentary referred to Task Force guidelines on breast cancer screening and protecting discussed how guidelines developed for primary care by speciality societies can lead to the overuse of medical services, including overdiagnosis and overtreatment. The commentary referred to Task Force guidelines on breast cancer screening and protecting and protecting and protecting and protecting and protections-nice and <a href="m

The Task Force works closely with specialists from the Canadian medical community to ensure that its members have the information they need to develop the best possible guidelines for Canadians. This work is done in the context of a stringent conflicts of interest policy. We are proud that our <u>clinical practice guidelines</u> are "by primary care, for primary care".

If you would like to contribute to the Task Force see the "Get Involved" section, below, or visit $\underline{www.canadiantaskforce.ca}$.

Sincerely,

Brett Thombs, PhD

Butt D Think

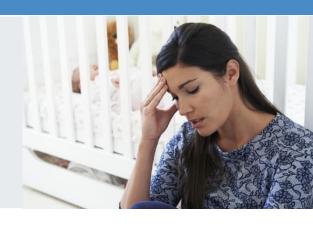

Chair, Canadian Task Force on Preventive Health Care

Upcoming Guidelines

Upcoming Task Force clinical practice guidelines include:

- Screening for thyroid dysfunction
- Screening for esophageal adenocarcinoma
- Screening for depression during pregnancy and the postpartum period

For more information, please visit the <u>Upcoming Guidelines webpage</u>.

Upcoming Conferences

To connect with primary care providers, the Task Force, exhibits at conferences across Canada. We offer free copies of knowledge translation tools, the opportunity to ask questions, make suggestions and more.

In May, the Task Force hosted a booth at the Choosing Wisely Canada National Meeting in Montreal and provided hundreds of English and French KT tools to delegates. Visit our upcoming booths at:

- Congrès annuel de médecine October 29-30, 2019 (Montreal)
- Family Medicine Forum
 October 30-November
 2, 2019 (Vancouver)

Visit the Task
Force website to

Get Involved with the Task Force!

- The Task Force **Internship Program** provides mentored training opportunities to Canadian health care trainees and early career professionals. Please visit the **Internship Program** webpage.
- Clinical Prevention Leaders Network: The Network promotes the use of clinical practice
 guidelines and addresses barriers to guideline implementation through peer-to-peer learning at a
 local level. If you would like to be considered for the next cohort of CPLs, please visit the CPL
 Network webpage.
- Healthcare Practitioner Tool Usability Testing involves clinicians in testing of Task Force
 knowledge translation tools. Help ensure that content, layout, navigation and look are appropriate
 and useful by emailing KTteam@canadiantaskforce.ca with the subject line "Tool Usability Testing".
 Compensation is provided.
- Guideline Development for Members of the Public: Patients and members of the public play a
 key role in guideline development by helping guide the evidence search on the harms and benefits
 of preventive health care, and developing knowledge translation tools. To get involved, email
 KTteam@canadiantaskforce.ca with the subject "Tool Usability Testing". Compensation is provided.
- **Guideline Topic Suggestions:** Is there a preventive health topic that you would like guidance on? Send your ideas for future guideline topics by completing an <u>online form</u>.
- **Newsletter Subject Suggestions**: Is there something you would like to see in the Task Force newsletter? Contact KTteam@canadiantaskforce.ca with the subject line "Newsletter Suggestion".
